

Submitted April 2016 to the Alternative Energy Committee by Rick Smith

This short video was shot in Cape Elizabeth at Fort Williams and includes comments from the general public on the large number of hydrogen cars on display. All but one of the vehicles is electric drive using no-combustion fuel cell technology; the BMW uses a hydrogen internal combustion engine and typical drivetrain. The next day these cars began a cross country road tour with our own Sen. Olympia Snowe driving the first car the first 200 yards.
